

NEW RAILROAD DONALDSON'S

Rich Strike in the Philadelphia Canyon Scene of Wondrous Activity.

The phenomenally rich gold strike made in Philadelphia canyon, 14 miles southwest of this place, is developing new and more sensational features each day, says the Butte Mountain Herald. In addition to the main strike of picture rock, which has widened out from three to twelve miles within a depth of eight feet, and is uncovered, for sixty feet in length on the surface, a number of strong ledges have been disclosed by recent work, all of which show values running from a low milling grade to as high as \$700 a ton.

It is suggestive that though the work of taking out the richly laden rock from the high-grade lead has been going on scarcely more than a week, about twenty sacks filled with the ore testify to the value of the discovery, the ultimate extent and significance of which can only as yet be guessed. The ore that is being taken from the main strike is of such amazing richness that the sacks when filled weigh about 150 pounds. The most conservative estimate places the average value at the rate of \$200,000 a ton.

The scene of the strike and surrounding hills presents an interesting spectacle. Increasing activity is noticeable in the canyon, and the adjoining claim owners can be seen delving into the earth with tools and with feverish impatience to uncover the pay dirt which nearly everywhere rewards their efforts.

As soon as it was known that the Nevada-Omahka company, backed by Union Pacific railway officials, had bought the property there was a stampede for the pay dirt. The company reserved one block and leased every foot of the remaining ground in blocks.

Among the lessees are Judge J. S. Parker of Reno, whose lease includes the shipping ore ground, and the Walker Mining company, who are leasing the property. The side strike of the high-grade discovery, the vein of which strikes in the direction which crosses the center of the lease.

DIAMOND QUEEN LESSEES ORE Company Has Main Scheme of Development Nearly Complete.

The Diamond Queen property, of which E. J. Vaughn, formerly of Salt Lake, is one of the large owners, is developing in the district, according to the Rhyolite Herald. Two leases are sacking respectable quantities of high grade shipping ore. The Harrover-Bell lease has out about twelve tons of that material. The sacking continues daily by reason of the fact that in the next few weeks. The workings are improving with progress and the outlook is very bright.

The Roberts lease is sinking in three feet of vein matter that assays \$50 to the ton for the entire width. The ore is being milled by the Harrover-Bell company. Rumor has it that the lessees are looking for home treatment by some means or other. The shaft will be run along the same lines as formerly.

The company operations have received a recent impetus by reason of new plans in the powers that are. The work will be pushed vigorously. The main development work will be for a shaft. At the regular monthly meeting of the board of directors of the Diamond Queen Mining company, held on September 15, Goldfield was elected president to fill the vacancy caused by the resignation of E. J. Vaughn, and E. J. Vaughn was elected secretary-treasurer. E. J. Warburton, resigned. The directors of the company remain the same—McCormack, T. R. Kernick, G. Webster, E. J. Warburton, E. J. Vaughn.

KNIGHT AND SMELTING. Advices Friends That Tintic Plant May Be Reopened.

One furnace has been closed at the Tintic smelter, according to the Rhyolite Herald. The plant was closed for the purpose of being drawn immediately from the furnace and within the week the general cleanup of the plant will have been completed and the smelter closed. The shutdown will be for a short time only and that when the plant is again opened Uncle Jesse Knight will not be connected with the management or ownership.

Mr. Knight was in the district last week and his friends are saying that he is to understand that he would be through with the smelting business on the last of next month or the first of next. The Tintic plant would be closed, but that there was a possibility of its being reopened.

GOOD PROGRESS IN CENTENNIAL TUNNEL

Splendid progress is now being made in driving the big tunnel which will tap the Centennial-Eureka shaft at a depth of about 500 feet. Already more than 100 feet of tunnel has been completed, says the Eureka Reporter. Work will be carried on by the Eureka Mining company. C. E. Allen and Superintendent R. A. Brown are of the opinion that about 400 feet of tunnel work can be completed each month, and at this rate the big bore can be finished within about eight months.

COPPER KEEPS UP PACE WITH RISE

Growth of Consumption as Great—No Steel Stocks Accumulated.

The contention that the improvement in copper consumption has not been as rapid as that of steel, as evidenced by many producers. They assert that the consumption of copper in this country is now larger than ever before, and that it will continue to expand until surplus stocks are practically exhausted.

So far as prices are concerned, copper has risen a large amount since the steel strike. This is due to the action of the steel owners in producing copper at a record-breaking rate when the general business of the country was on a 60 per cent basis, says the Wall Street News. As an example, at the present or more the steel companies were operating on a basis of 60 per cent of capacity. They were limiting production to consumption and accumulating no stocks. The country was producing copper on a 100 per cent basis on the face of the fact that consumption was running at 70 per cent.

The result was a heavy surplus accumulation which at present is a menace to the steel industry. The steel owners are now producing steel at a rate which is not being absorbed by the market. The steel owners are now producing steel at a rate which is not being absorbed by the market. The steel owners are now producing steel at a rate which is not being absorbed by the market.

SLIGHT CHANGE OF RATIO. In other words there has been no change to speak of in the ratio of copper production to pig iron production over the last five years, with the exception of 1908. In the latter year copper production decreased over 38 per cent, while on the other hand copper production increased 43 per cent.

The argument that copper production has increased more rapidly than that of steel does not hold, because the ratio of copper production to pig iron production has been reduced since 1908, while the increase in copper production amounts to about 175 per cent.

No pronounced improvement in the copper metal situation so far as prices are concerned is looked for until the latter part of the year. The steel industry is causing no enthusiasm from the producers. The steel industry is causing no enthusiasm from the producers. The steel industry is causing no enthusiasm from the producers.

FRACTION ORE HOLDS OUT. New Body of High Grade Is Opened in Mohawk.

Goldfield, Nev., Sept. 26.—Information from officials of the Combination Fraction company indicates that the big strike reported there two weeks ago still holds its general character and high values. They were not inclined to make an extended statement, following their usual policy, but they said that the new body of ore is present in an immense body.

The August output of the Florence mill was 10,000 tons. The mill is now ready for operation. It increases the capacity 50 per cent. The Merrimac mine is sinking and the high values are being improved, and is attracting more interest. Shipments average \$150 a ton. The company is sinking a new shaft to a depth of 1,000 feet. The company is sinking a new shaft to a depth of 1,000 feet.

PUMP FOR TINTIC CENTRAL.

A pump has been ordered for handling the water in the Tintic Central. The shaft is being sunk to a depth of about 1,000 feet. The pump is being ordered for handling the water in the Tintic Central. The shaft is being sunk to a depth of about 1,000 feet.

OBSERVE FAST DAY. Mormon Church Conference Will Be Opened Next Week.

Fast day was observed yesterday by the Mormon church stakes in Salt Lake at the suggestion of the first presidency of the church for the reason that the semi-annual conference will be opened next week, the first Sunday of the month. The conference will be held at the Tabernacle and will close on day after tomorrow.

You Can't Be Downhearted.

That is, you can't while you are taking Seltzer Pills. They dispel the despondency and by their fine tonic action replace that worn-out "all-in" condition with buoyancy, vigor and good cheer. Price 10c a box, six boxes \$5, fully guaranteed on the money-back plan. Address or call F. J. Hill Drug Co., "The Never Substitutes" corner Second South and West Temple streets.

X-RAY STRIKE IS IMPORTANT

Confirms Belief That the New Mine Is to Rank With Mendha.

Pioche, Sept. 26.—The X-ray mine in the Highland district has furnished some interesting news this week. At a distance of 302 feet in from the portal of the tunnel, an eight-foot body of ore has been encountered.

Judging from the values contained the prediction made some time ago by Manager Joe Taylor that the mine would, in a little time, rank in importance with its illustrious neighbor—the Mendha—is about to be realized.

Out of forty samples assayed during the last week or ten days, so Mr. Taylor declares, the returns showed the presence of lead from 15 to 21 per cent lead, with the silver contents running from 2 to 6 ounces.

Specimens of the ore brought to the surface yesterday showed a high interest among local mining men, some of whom pronounced the specimens of crystallized lead as yet fairly rich. It is understood that some of the pieces are to be presented to the Commercial Club.

The fact that they did not anticipate such important discovery in the tunnel so soon adds to the gratification of Mr. Taylor and his associates. The discovery of the ore is yet fairly rich. It is understood that some of the pieces are to be presented to the Commercial Club.

GREELY RIGHT ABOUT NEVADA Predicted Great Desert Would Be Scene of Countless Strikes.

When Horace Greeley crossed the plains in 1870 he made a speech at Placerville, Cal. in which he said that in passing over what was then called "the Great American desert," he had been struck by the appalling barrenness and desolation of that immense tract, and that, having pondered over the matter and reflecting that the Almighty had made nothing in vain, he had come to the conclusion that that section was to be the scene of great mineral discovery.

He said, "It will take 100,000 miners 100 years to thoroughly explore it. I believe that the state of Nevada alone—a state with an area of more than 112,000 square miles—remember that but a comparatively small area of that immense territory has been prospected, we cannot but conclude that there was something of the same character in the Nevada of Horace Greeley, says the Mining Financial News.

He said, "It will take 100,000 miners 100 years to thoroughly explore it. I believe that the state of Nevada alone—a state with an area of more than 112,000 square miles—remember that but a comparatively small area of that immense territory has been prospected, we cannot but conclude that there was something of the same character in the Nevada of Horace Greeley, says the Mining Financial News.

CROPPINGS WASHED DOWN. The region of the Comstock is an arid one, but the water which is carried away from the disintegrated strappings of the gold down the gulches that lead to the Comstock is a great loss.

The Comstock is an arid one, but the water which is carried away from the disintegrated strappings of the gold down the gulches that lead to the Comstock is a great loss. The Comstock is an arid one, but the water which is carried away from the disintegrated strappings of the gold down the gulches that lead to the Comstock is a great loss.

Rawhide on Old Trail. Rawhide is the only camp in the lot actually located on ground through which the overland route directly ran, and it was the last to be discovered.

It is possible that gold had been found in the rawhide many years before the rush came, but the ground being at that time within the boundaries of the Walker Indian reservation, could not be used by the discoverer or discoverers. It is a remarkable thing that the discovery of the rawhide was made in 1907—less than a year after the Walker reservation was opened to the public.

NOTICE TO STOCKHOLDERS SINCLAIR LAND & FRUIT COMPANY Place of business Salt Lake City, Utah.

Notice is hereby given that at a meeting of the stockholders of the Sinclair Land & Fruit company, held on the 7th day of September, A. D. 1909, an assessment of \$10.00 per share was levied on the stock of said corporation, payable on the 15th day of October, A. D. 1909, to the company's office, No. 506 Security & Trust Building, Salt Lake City, Utah.
